

UPSC Previous Year Practice 2020 (2020)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use features? (variation 91)
2. Which option is a correct use case for regression in Machine Learning?
3. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
4. What is the most accurate beginner-level explanation of accuracy? (variation 97)
5. Which option is a correct use case for regression in Machine Learning? (variation 83)
6. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
7. What is the most accurate beginner-level explanation of labels? (variation 352)
8. Which statement best describes training data in Machine Learning? (variation 350)
9. Which statement best describes overfitting in Machine Learning? (variation 105)
10. When working with Machine Learning, why would a developer use train-test split? (variation 96)
11. When working with Machine Learning, why would a developer use features? (variation 101)
12. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
13. Which statement best describes training data in Machine Learning? (variation 70)
14. What is the most accurate beginner-level explanation of labels? (variation 102)
15. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
16. What is the most accurate beginner-level explanation of accuracy? (variation 87)
17. Which statement best describes training data in Machine Learning? (variation 80)

18. Which statement best describes training data in Machine Learning? (variation 100)
19. What is the most accurate beginner-level explanation of accuracy?
20. What is the most accurate beginner-level explanation of labels?
21. Which statement best describes training data in Machine Learning?
22. Which option is a correct use case for regression in Machine Learning? (variation 353)
23. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
24. Which option is a correct use case for confusion matrix in Machine Learning?
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
26. Which statement best describes overfitting in Machine Learning? (variation 75)
27. Which statement best describes training data in Machine Learning? (variation 90)
28. A student says 'classification' is not relevant to real projects. What is the best correction?
29. What is the most accurate beginner-level explanation of labels? (variation 92)
30. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
31. What is the most accurate beginner-level explanation of accuracy? (variation 77)
32. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
33. What is the most accurate beginner-level explanation of labels? (variation 82)
34. Which statement best describes overfitting in Machine Learning?
35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
36. Which option is a correct use case for regression in Machine Learning? (variation 103)

37. When working with Machine Learning, why would a developer use train-test split? (variation 76)
38. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
39. When working with Machine Learning, why would a developer use train-test split?
40. Which option is a correct use case for regression in Machine Learning? (variation 93)
41. What is the most accurate beginner-level explanation of labels? (variation 72)
42. Which statement best describes overfitting in Machine Learning? (variation 85)
43. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
44. When working with Machine Learning, why would a developer use train-test split? (variation 356)
45. What is the most accurate beginner-level explanation of accuracy? (variation 357)
46. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
47. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
48. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
49. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
50. Which statement best describes overfitting in Machine Learning? (variation 355)
51. When working with Machine Learning, why would a developer use features? (variation 351)
52. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
53. When working with Machine Learning, why would a developer use features? (variation 71)
54. When working with Machine Learning, why would a developer use features? (variation 81)
55. When working with Machine Learning, why would a developer use features?

56. When working with Machine Learning, why would a developer use train-test split? (variation 86)

57. When working with Machine Learning, why would a developer use train-test split? (variation 106)

58. Which option is a correct use case for regression in Machine Learning? (variation 73)

59. Which statement best describes overfitting in Machine Learning? (variation 95)

60. What is the most accurate beginner-level explanation of accuracy? (variation 107)
