

UPSC Previous Year Practice 2023 (2023)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 106)
2. Which statement best describes training data in Machine Learning? (variation 70)
3. What is the most accurate beginner-level explanation of accuracy? (variation 77)
4. Which statement best describes training data in Machine Learning?
5. Which option is a correct use case for regression in Machine Learning? (variation 83)
6. When working with Machine Learning, why would a developer use features? (variation 91)
7. What is the most accurate beginner-level explanation of labels? (variation 72)
8. Which option is a correct use case for regression in Machine Learning? (variation 93)
9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
10. When working with Machine Learning, why would a developer use features? (variation 81)
11. Which option is a correct use case for regression in Machine Learning? (variation 353)
12. Which option is a correct use case for regression in Machine Learning? (variation 73)
13. When working with Machine Learning, why would a developer use features? (variation 101)
14. What is the most accurate beginner-level explanation of labels? (variation 102)
15. When working with Machine Learning, why would a developer use train-test split?
16. Which statement best describes overfitting in Machine Learning? (variation 355)
17. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

18. Which statement best describes training data in Machine Learning? (variation 90)
19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
20. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
21. Which statement best describes training data in Machine Learning? (variation 100)
22. When working with Machine Learning, why would a developer use train-test split? (variation 86)
23. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
24. Which statement best describes training data in Machine Learning? (variation 350)
25. What is the most accurate beginner-level explanation of labels? (variation 92)
26. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
27. What is the most accurate beginner-level explanation of accuracy? (variation 87)
28. Which statement best describes training data in Machine Learning? (variation 80)
29. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
30. When working with Machine Learning, why would a developer use train-test split? (variation 96)
31. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
32. Which statement best describes overfitting in Machine Learning? (variation 95)
33. When working with Machine Learning, why would a developer use features?
34. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
35. What is the most accurate beginner-level explanation of labels?
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
38. Which option is a correct use case for regression in Machine Learning? (variation 103)
39. Which statement best describes overfitting in Machine Learning? (variation 85)
40. What is the most accurate beginner-level explanation of labels? (variation 352)
41. What is the most accurate beginner-level explanation of accuracy? (variation 107)
42. When working with Machine Learning, why would a developer use features? (variation 351)
43. Which statement best describes overfitting in Machine Learning? (variation 105)
44. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
45. When working with Machine Learning, why would a developer use train-test split? (variation 76)
46. A student says 'classification' is not relevant to real projects. What is the best correction?
47. What is the most accurate beginner-level explanation of accuracy?
48. When working with Machine Learning, why would a developer use features? (variation 71)
49. What is the most accurate beginner-level explanation of accuracy? (variation 97)
50. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
51. Which option is a correct use case for confusion matrix in Machine Learning?
52. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
53. What is the most accurate beginner-level explanation of labels? (variation 82)
54. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

56. Which statement best describes overfitting in Machine Learning?

57. What is the most accurate beginner-level explanation of accuracy? (variation 357)

58. When working with Machine Learning, why would a developer use train-test split? (variation 356)

59. Which option is a correct use case for regression in Machine Learning?

60. Which statement best describes overfitting in Machine Learning? (variation 75)
