

UPSC Previous Year Practice 2025 (2025)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
2. When working with Machine Learning, why would a developer use train-test split? (variation 96)
3. When working with Machine Learning, why would a developer use train-test split? (variation 76)
4. What is the most accurate beginner-level explanation of accuracy? (variation 357)
5. What is the most accurate beginner-level explanation of labels? (variation 92)
6. When working with Machine Learning, why would a developer use train-test split?
7. When working with Machine Learning, why would a developer use features? (variation 81)
8. When working with Machine Learning, why would a developer use features? (variation 91)
9. What is the most accurate beginner-level explanation of accuracy? (variation 87)
10. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
11. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
12. What is the most accurate beginner-level explanation of accuracy? (variation 97)
13. When working with Machine Learning, why would a developer use features? (variation 101)
14. Which statement best describes training data in Machine Learning?
15. What is the most accurate beginner-level explanation of labels? (variation 352)
16. When working with Machine Learning, why would a developer use train-test split? (variation 106)
17. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

18. What is the most accurate beginner-level explanation of labels? (variation 72)
19. When working with Machine Learning, why would a developer use train-test split? (variation 356)
20. Which statement best describes overfitting in Machine Learning? (variation 105)
21. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
22. Which option is a correct use case for regression in Machine Learning?
23. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
24. A student says 'classification' is not relevant to real projects. What is the best correction?
25. Which statement best describes training data in Machine Learning? (variation 350)
26. Which option is a correct use case for confusion matrix in Machine Learning?
27. What is the most accurate beginner-level explanation of labels? (variation 82)
28. Which statement best describes overfitting in Machine Learning? (variation 85)
29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
30. Which statement best describes training data in Machine Learning? (variation 80)
31. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
32. Which statement best describes overfitting in Machine Learning? (variation 95)
33. Which option is a correct use case for regression in Machine Learning? (variation 103)
34. Which statement best describes training data in Machine Learning? (variation 70)
35. When working with Machine Learning, why would a developer use features?
36. Which option is a correct use case for regression in Machine Learning? (variation 93)

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
38. Which option is a correct use case for regression in Machine Learning? (variation 353)
39. Which option is a correct use case for regression in Machine Learning? (variation 73)
40. Which statement best describes training data in Machine Learning? (variation 90)
41. What is the most accurate beginner-level explanation of labels?
42. What is the most accurate beginner-level explanation of accuracy? (variation 107)
43. Which statement best describes overfitting in Machine Learning? (variation 75)
44. Which statement best describes overfitting in Machine Learning? (variation 355)
45. What is the most accurate beginner-level explanation of labels? (variation 102)
46. When working with Machine Learning, why would a developer use features? (variation 71)
47. Which statement best describes training data in Machine Learning? (variation 100)
48. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
49. When working with Machine Learning, why would a developer use features? (variation 351)
50. Which statement best describes overfitting in Machine Learning?
51. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
52. Which option is a correct use case for regression in Machine Learning? (variation 83)
53. When working with Machine Learning, why would a developer use train-test split? (variation 86)
54. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
55. What is the most accurate beginner-level explanation of accuracy?

56. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

57. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

58. What is the most accurate beginner-level explanation of accuracy? (variation 77)

59. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

60. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
