

UPSC Previous Year Practice 2026 (2026)

Subject: General | Topic: Machine Learning

1. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
2. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
3. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
4. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
5. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
6. What is the most accurate beginner-level explanation of labels? (variation 92)
7. When working with Machine Learning, why would a developer use train-test split? (variation 356)
8. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
9. When working with Machine Learning, why would a developer use train-test split? (variation 106)
10. When working with Machine Learning, why would a developer use train-test split? (variation 96)
11. Which option is a correct use case for regression in Machine Learning? (variation 93)
12. Which option is a correct use case for regression in Machine Learning? (variation 73)
13. What is the most accurate beginner-level explanation of accuracy? (variation 87)
14. Which statement best describes training data in Machine Learning?
15. When working with Machine Learning, why would a developer use features?
16. What is the most accurate beginner-level explanation of accuracy? (variation 107)
17. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

18. Which statement best describes overfitting in Machine Learning? (variation 95)
19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
20. Which statement best describes overfitting in Machine Learning?
21. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
22. When working with Machine Learning, why would a developer use features? (variation 101)
23. Which statement best describes overfitting in Machine Learning? (variation 355)
24. What is the most accurate beginner-level explanation of accuracy? (variation 97)
25. Which statement best describes training data in Machine Learning? (variation 90)
26. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
27. When working with Machine Learning, why would a developer use train-test split? (variation 86)
28. What is the most accurate beginner-level explanation of accuracy?
29. Which statement best describes training data in Machine Learning? (variation 70)
30. Which option is a correct use case for confusion matrix in Machine Learning?
31. Which statement best describes overfitting in Machine Learning? (variation 105)
32. When working with Machine Learning, why would a developer use train-test split?
33. Which option is a correct use case for regression in Machine Learning? (variation 103)
34. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
35. Which statement best describes training data in Machine Learning? (variation 100)
36. Which option is a correct use case for regression in Machine Learning? (variation 353)

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
38. What is the most accurate beginner-level explanation of accuracy? (variation 77)
39. Which statement best describes overfitting in Machine Learning? (variation 75)
40. What is the most accurate beginner-level explanation of labels? (variation 72)
41. What is the most accurate beginner-level explanation of labels? (variation 102)
42. When working with Machine Learning, why would a developer use features? (variation 81)
43. When working with Machine Learning, why would a developer use features? (variation 91)
44. Which statement best describes training data in Machine Learning? (variation 80)
45. Which statement best describes training data in Machine Learning? (variation 350)
46. When working with Machine Learning, why would a developer use train-test split? (variation 76)
47. What is the most accurate beginner-level explanation of labels? (variation 352)
48. What is the most accurate beginner-level explanation of labels?
49. When working with Machine Learning, why would a developer use features? (variation 351)
50. Which option is a correct use case for regression in Machine Learning?
51. Which statement best describes overfitting in Machine Learning? (variation 85)
52. Which option is a correct use case for regression in Machine Learning? (variation 83)
53. What is the most accurate beginner-level explanation of labels? (variation 82)
54. What is the most accurate beginner-level explanation of accuracy? (variation 357)
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

57. A student says 'classification' is not relevant to real projects. What is the best correction?

58. When working with Machine Learning, why would a developer use features? (variation 71)

59. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

60. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
