

University Exams Previous Year Practice 2019 (2019)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction?
2. What is the most accurate beginner-level explanation of labels? (variation 92)
3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
4. When working with Machine Learning, why would a developer use features?
5. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
6. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
7. Which statement best describes overfitting in Machine Learning? (variation 105)
8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
9. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
10. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
11. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
12. What is the most accurate beginner-level explanation of accuracy? (variation 107)
13. Which statement best describes overfitting in Machine Learning? (variation 355)
14. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
15. When working with Machine Learning, why would a developer use features? (variation 81)
16. Which option is a correct use case for confusion matrix in Machine Learning?
17. Which option is a correct use case for regression in Machine Learning? (variation 83)

18. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
19. Which statement best describes training data in Machine Learning? (variation 70)
20. When working with Machine Learning, why would a developer use train-test split?
21. Which option is a correct use case for regression in Machine Learning? (variation 73)
22. When working with Machine Learning, why would a developer use features? (variation 71)
23. What is the most accurate beginner-level explanation of labels? (variation 352)
24. Which option is a correct use case for regression in Machine Learning? (variation 353)
25. Which statement best describes overfitting in Machine Learning?
26. Which option is a correct use case for regression in Machine Learning? (variation 93)
27. Which option is a correct use case for regression in Machine Learning? (variation 103)
28. What is the most accurate beginner-level explanation of accuracy? (variation 357)
29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
30. When working with Machine Learning, why would a developer use train-test split? (variation 76)
31. What is the most accurate beginner-level explanation of accuracy? (variation 77)
32. When working with Machine Learning, why would a developer use features? (variation 101)
33. Which statement best describes overfitting in Machine Learning? (variation 75)
34. What is the most accurate beginner-level explanation of labels? (variation 82)
35. What is the most accurate beginner-level explanation of accuracy? (variation 87)
36. When working with Machine Learning, why would a developer use train-test split? (variation 106)

37. Which statement best describes training data in Machine Learning? (variation 100)
38. When working with Machine Learning, why would a developer use train-test split? (variation 96)
39. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
40. What is the most accurate beginner-level explanation of labels? (variation 72)
41. What is the most accurate beginner-level explanation of accuracy?
42. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
43. When working with Machine Learning, why would a developer use features? (variation 91)
44. When working with Machine Learning, why would a developer use train-test split? (variation 356)
45. What is the most accurate beginner-level explanation of labels? (variation 102)
46. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
47. Which statement best describes training data in Machine Learning? (variation 350)
48. Which statement best describes training data in Machine Learning? (variation 90)
49. Which statement best describes overfitting in Machine Learning? (variation 85)
50. Which option is a correct use case for regression in Machine Learning?
51. Which statement best describes training data in Machine Learning?
52. What is the most accurate beginner-level explanation of accuracy? (variation 97)
53. When working with Machine Learning, why would a developer use features? (variation 351)
54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
55. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

56. Which statement best describes training data in Machine Learning? (variation 80)

57. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

58. What is the most accurate beginner-level explanation of labels?

59. When working with Machine Learning, why would a developer use train-test split? (variation 86)

60. Which statement best describes overfitting in Machine Learning? (variation 95)
