

University Exams Previous Year Practice 2020 (2020)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
2. When working with Machine Learning, why would a developer use train-test split? (variation 356)
3. When working with Machine Learning, why would a developer use features? (variation 101)
4. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
5. Which option is a correct use case for regression in Machine Learning? (variation 353)
6. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
7. When working with Machine Learning, why would a developer use features?
8. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
9. Which option is a correct use case for regression in Machine Learning? (variation 83)
10. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
11. Which statement best describes overfitting in Machine Learning? (variation 355)
12. Which statement best describes overfitting in Machine Learning? (variation 95)
13. What is the most accurate beginner-level explanation of labels?
14. Which statement best describes training data in Machine Learning? (variation 70)
15. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
16. Which statement best describes training data in Machine Learning? (variation 80)
17. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

18. When working with Machine Learning, why would a developer use features? (variation 91)
19. Which option is a correct use case for regression in Machine Learning?
20. When working with Machine Learning, why would a developer use features? (variation 81)
21. What is the most accurate beginner-level explanation of labels? (variation 82)
22. Which option is a correct use case for regression in Machine Learning? (variation 73)
23. Which statement best describes training data in Machine Learning? (variation 350)
24. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
25. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
26. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
27. What is the most accurate beginner-level explanation of accuracy? (variation 357)
28. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
30. When working with Machine Learning, why would a developer use train-test split? (variation 76)
31. Which option is a correct use case for regression in Machine Learning? (variation 93)
32. Which statement best describes training data in Machine Learning? (variation 90)
33. Which option is a correct use case for regression in Machine Learning? (variation 103)
34. What is the most accurate beginner-level explanation of labels? (variation 102)
35. Which statement best describes overfitting in Machine Learning?
36. A student says 'classification' is not relevant to real projects. What is the best correction?

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
38. What is the most accurate beginner-level explanation of accuracy?
39. What is the most accurate beginner-level explanation of labels? (variation 72)
40. Which statement best describes training data in Machine Learning?
41. What is the most accurate beginner-level explanation of accuracy? (variation 87)
42. Which statement best describes training data in Machine Learning? (variation 100)
43. Which statement best describes overfitting in Machine Learning? (variation 85)
44. When working with Machine Learning, why would a developer use train-test split?
45. When working with Machine Learning, why would a developer use train-test split? (variation 86)
46. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
47. When working with Machine Learning, why would a developer use features? (variation 351)
48. When working with Machine Learning, why would a developer use train-test split? (variation 106)
49. What is the most accurate beginner-level explanation of accuracy? (variation 77)
50. What is the most accurate beginner-level explanation of accuracy? (variation 107)
51. Which option is a correct use case for confusion matrix in Machine Learning?
52. Which statement best describes overfitting in Machine Learning? (variation 105)
53. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
54. What is the most accurate beginner-level explanation of labels? (variation 92)
55. Which statement best describes overfitting in Machine Learning? (variation 75)

56. When working with Machine Learning, why would a developer use features? (variation 71)
57. What is the most accurate beginner-level explanation of accuracy? (variation 97)
58. When working with Machine Learning, why would a developer use train-test split? (variation 96)
59. What is the most accurate beginner-level explanation of labels? (variation 352)
60. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
