

University Exams Previous Year Practice 2021 (2021)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for regression in Machine Learning? (variation 103)
2. What is the most accurate beginner-level explanation of labels? (variation 72)
3. Which statement best describes training data in Machine Learning? (variation 80)
4. What is the most accurate beginner-level explanation of accuracy? (variation 77)
5. What is the most accurate beginner-level explanation of accuracy? (variation 97)
6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
7. What is the most accurate beginner-level explanation of labels?
8. Which option is a correct use case for regression in Machine Learning? (variation 73)
9. What is the most accurate beginner-level explanation of accuracy?
10. What is the most accurate beginner-level explanation of labels? (variation 92)
11. When working with Machine Learning, why would a developer use features? (variation 101)
12. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
13. When working with Machine Learning, why would a developer use features? (variation 91)
14. Which statement best describes training data in Machine Learning? (variation 100)
15. Which statement best describes training data in Machine Learning?
16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
17. When working with Machine Learning, why would a developer use train-test split?

18. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

19. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

20. Which statement best describes overfitting in Machine Learning? (variation 95)

21. Which option is a correct use case for confusion matrix in Machine Learning?

22. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

23. Which statement best describes training data in Machine Learning? (variation 350)

24. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

25. When working with Machine Learning, why would a developer use features? (variation 81)

26. When working with Machine Learning, why would a developer use train-test split? (variation 96)

27. When working with Machine Learning, why would a developer use features? (variation 351)

28. What is the most accurate beginner-level explanation of accuracy? (variation 357)

29. Which option is a correct use case for regression in Machine Learning? (variation 83)

30. What is the most accurate beginner-level explanation of accuracy? (variation 107)

31. When working with Machine Learning, why would a developer use train-test split? (variation 356)

32. What is the most accurate beginner-level explanation of labels? (variation 352)

33. Which statement best describes overfitting in Machine Learning? (variation 105)

34. When working with Machine Learning, why would a developer use train-test split? (variation 76)

35. When working with Machine Learning, why would a developer use features?

36. Which statement best describes overfitting in Machine Learning? (variation 85)

37. Which statement best describes overfitting in Machine Learning? (variation 75)
38. Which statement best describes training data in Machine Learning? (variation 70)
39. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
40. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
41. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
42. Which option is a correct use case for regression in Machine Learning?
43. Which statement best describes training data in Machine Learning? (variation 90)
44. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
45. Which option is a correct use case for regression in Machine Learning? (variation 353)
46. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
47. What is the most accurate beginner-level explanation of labels? (variation 102)
48. Which statement best describes overfitting in Machine Learning?
49. When working with Machine Learning, why would a developer use train-test split? (variation 86)
50. When working with Machine Learning, why would a developer use features? (variation 71)
51. What is the most accurate beginner-level explanation of accuracy? (variation 87)
52. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
53. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
54. A student says 'classification' is not relevant to real projects. What is the best correction?
55. When working with Machine Learning, why would a developer use train-test split? (variation 106)

56. What is the most accurate beginner-level explanation of labels? (variation 82)
57. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
58. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
59. Which statement best describes overfitting in Machine Learning? (variation 355)
60. Which option is a correct use case for regression in Machine Learning? (variation 93)
