

University Exams Previous Year Practice 2023 (2023)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning? (variation 85)
2. What is the most accurate beginner-level explanation of labels?
3. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
4. When working with Machine Learning, why would a developer use features?
5. What is the most accurate beginner-level explanation of accuracy?
6. Which statement best describes training data in Machine Learning? (variation 350)
7. Which statement best describes overfitting in Machine Learning? (variation 95)
8. Which statement best describes training data in Machine Learning? (variation 90)
9. Which option is a correct use case for regression in Machine Learning? (variation 83)
10. What is the most accurate beginner-level explanation of labels? (variation 352)
11. What is the most accurate beginner-level explanation of accuracy? (variation 97)
12. What is the most accurate beginner-level explanation of accuracy? (variation 357)
13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
14. What is the most accurate beginner-level explanation of labels? (variation 82)
15. What is the most accurate beginner-level explanation of accuracy? (variation 107)
16. Which statement best describes overfitting in Machine Learning? (variation 105)
17. Which option is a correct use case for confusion matrix in Machine Learning?

18. Which option is a correct use case for regression in Machine Learning?
19. Which statement best describes training data in Machine Learning?
20. Which statement best describes training data in Machine Learning? (variation 100)
21. Which statement best describes overfitting in Machine Learning?
22. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
23. When working with Machine Learning, why would a developer use features? (variation 101)
24. Which statement best describes training data in Machine Learning? (variation 80)
25. When working with Machine Learning, why would a developer use features? (variation 91)
26. When working with Machine Learning, why would a developer use train-test split? (variation 106)
27. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
28. When working with Machine Learning, why would a developer use train-test split? (variation 86)
29. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
30. Which option is a correct use case for regression in Machine Learning? (variation 103)
31. When working with Machine Learning, why would a developer use train-test split?
32. A student says 'classification' is not relevant to real projects. What is the best correction?
33. Which statement best describes overfitting in Machine Learning? (variation 355)
34. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
36. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

37. Which option is a correct use case for regression in Machine Learning? (variation 73)
38. When working with Machine Learning, why would a developer use train-test split? (variation 76)
39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
40. Which statement best describes overfitting in Machine Learning? (variation 75)
41. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
42. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
43. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
44. What is the most accurate beginner-level explanation of labels? (variation 72)
45. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
46. Which option is a correct use case for regression in Machine Learning? (variation 93)
47. When working with Machine Learning, why would a developer use features? (variation 81)
48. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
49. When working with Machine Learning, why would a developer use features? (variation 351)
50. What is the most accurate beginner-level explanation of accuracy? (variation 87)
51. What is the most accurate beginner-level explanation of accuracy? (variation 77)
52. Which option is a correct use case for regression in Machine Learning? (variation 353)
53. When working with Machine Learning, why would a developer use train-test split? (variation 356)
54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
55. What is the most accurate beginner-level explanation of labels? (variation 92)

56. When working with Machine Learning, why would a developer use train-test split? (variation 96)

57. When working with Machine Learning, why would a developer use features? (variation 71)

58. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

59. What is the most accurate beginner-level explanation of labels? (variation 102)

60. Which statement best describes training data in Machine Learning? (variation 70)
