

University Exams Previous Year Practice 2026 (2026)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning? (variation 105)
2. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
3. When working with Machine Learning, why would a developer use features? (variation 101)
4. When working with Machine Learning, why would a developer use train-test split? (variation 356)
5. When working with Machine Learning, why would a developer use features? (variation 351)
6. Which statement best describes overfitting in Machine Learning? (variation 85)
7. When working with Machine Learning, why would a developer use features?
8. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
9. When working with Machine Learning, why would a developer use train-test split? (variation 86)
10. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
11. What is the most accurate beginner-level explanation of labels? (variation 82)
12. When working with Machine Learning, why would a developer use train-test split? (variation 96)
13. Which statement best describes training data in Machine Learning? (variation 90)
14. Which option is a correct use case for regression in Machine Learning? (variation 73)
15. Which statement best describes training data in Machine Learning? (variation 100)
16. When working with Machine Learning, why would a developer use train-test split?
17. What is the most accurate beginner-level explanation of labels?

18. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
20. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
21. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
22. When working with Machine Learning, why would a developer use features? (variation 91)
23. What is the most accurate beginner-level explanation of accuracy?
24. Which option is a correct use case for regression in Machine Learning?
25. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
26. What is the most accurate beginner-level explanation of accuracy? (variation 87)
27. Which statement best describes training data in Machine Learning?
28. Which option is a correct use case for regression in Machine Learning? (variation 93)
29. When working with Machine Learning, why would a developer use features? (variation 81)
30. What is the most accurate beginner-level explanation of accuracy? (variation 107)
31. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
32. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
33. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
34. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
35. Which option is a correct use case for confusion matrix in Machine Learning?
36. What is the most accurate beginner-level explanation of accuracy? (variation 97)

37. What is the most accurate beginner-level explanation of labels? (variation 102)
38. Which statement best describes training data in Machine Learning? (variation 80)
39. Which statement best describes overfitting in Machine Learning? (variation 75)
40. When working with Machine Learning, why would a developer use train-test split? (variation 76)
41. When working with Machine Learning, why would a developer use features? (variation 71)
42. What is the most accurate beginner-level explanation of labels? (variation 92)
43. What is the most accurate beginner-level explanation of accuracy? (variation 77)
44. When working with Machine Learning, why would a developer use train-test split? (variation 106)
45. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
46. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
47. Which statement best describes training data in Machine Learning? (variation 70)
48. Which option is a correct use case for regression in Machine Learning? (variation 83)
49. What is the most accurate beginner-level explanation of accuracy? (variation 357)
50. Which statement best describes overfitting in Machine Learning?
51. Which statement best describes training data in Machine Learning? (variation 350)
52. Which option is a correct use case for regression in Machine Learning? (variation 353)
53. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
54. What is the most accurate beginner-level explanation of labels? (variation 72)
55. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

56. Which statement best describes overfitting in Machine Learning? (variation 95)

57. What is the most accurate beginner-level explanation of labels? (variation 352)

58. Which statement best describes overfitting in Machine Learning? (variation 355)

59. Which option is a correct use case for regression in Machine Learning? (variation 103)

60. A student says 'classification' is not relevant to real projects. What is the best correction?
